

Effectiveness of Intervention (EI)

Print (in black and white) the Class Status Report for each grade level or classroom for assessment 1

For each grade/classroom: highlight the colors for each of the instructional levels on the assessment 1 reports: red = intensive, yellow = strategic, green = initial

Using the latest assessment Class Status Report, match students, and color in the cell that corresponds to name on the Assessment 1 sheet with the color that reflects their risk level on assessment 3 or 4. (Ignore the numbers in the cells.)

Add up all students who began the year as intensive or strategic and were present for the latest assessment. Count up the number of these students who were initial on the last assessment period. Divide the total count into this number to get the EI index. (The same procedure can be used to determine an EI from intensive to strategic or strategic to initial.)
